

**Supplemental Information Regarding EV Charger to Accompany 3/12/24 Email to B. Dennler
D. Sorrentino - 3/13/24**

Return on Investment (ROI) as limited by the duration of a warranty is not a typical consideration for municipal capital improvements.

Facts & Figures

- 44,313 EV's are registered in Connecticut as of 12/2023, a 52% increase from 21,377 in 12/2021 (Source: CT DEEP Registration Factsheet Rev. 2/2/24, attached)
- 181 EV's are registered in Colchester as of 12/2023, a 60% increase from 72 in 12/2021 (Source: CT DEEP Registration Fact Sheet Rev. 2/2/24, attached)
- As of 1/2024, the Town pays \$0.07 per kWh for electricity at 127 Norwich Avenue (1/15/24 – 2/13/24 bill, attached)
- The average cost of utilizing a public EV charger in CT is \$0.59/kWh for Level 2 (Source CT Mirror Article 1/19/24)
- The Town's fee per kWh can be any amount over what we pay per kWh to make a profit. A lower fee would incentivize the charger's use, a higher fee would not.
- A reduced fee or no fee per kWh could be offered as a benefit to attract and/or retain municipal employees that current have or would consider purchasing an EV.
- The Town's fee per kWh can be set, say at \$0.35/kWh above cost (\$0.42/kWh total) and fluctuate as needed.
- ChargePoint CT4021: "Our Level 2 Commercial chargers charge at a maximum rate of 25 RPH (miles of Range Per Hour)" (Source: ChargePoint CT4021 Specification Sheet)
- Vehicle range is directly dependent on battery capacity. Most EVs can generally travel 3 to 4 miles per kilowatt-hour (kWh) of energy. A full recharge, if your vehicle's range is 300 miles, would require 75-100 kWh
- ChargePoint CT4021 = 7.2 kW per hour of charging time
- Calculation Example: 25 miles of range per hour X 4 hours = 100 miles of range
A 4-hour charge @ \$0.42/kWh (7.2 kW X 4 hours = 28.8 kWh X \$0.42/kWh) = \$12
Electricity costs Town (7.2 kW X 4 hours = 28.8 kWh X \$0.07/kWh) = \$2
Net to Town for 4 hours of use of 1 charging port = \$10
Net to Town for 4 hours of use of 2 charging ports = \$20
Average: Town nets +\$2.50 for every hour that each port is in use
- At \$2.50 net to Town per hour of use, the \$19,250 Town share of the project cost would take 7,700 charging hours to recuperate.

- ROI Analysis by day over Warranty period:
The pre-paid Parts & Labor Warranty period is 5 years, which has 1,826 days
7,700 charging hours over 1,826 days would require a usage of 4.2 charging hours per day over 5 years.
- ROI Analysis by week over the Warranty period:
The pre-paid Parts & Labor Warranty period is 5 years, which has 260 weeks.
7,700 charging hours over 260 weeks would require a usage of 29.6 charging hours per week over 5 years.
- If not incentivized by a lower fee per kWh, 1 or 2 municipal employees charging their EV at Town Hall during their work day could recuperate nearly the entire project cost over the 5-year Warranty period.
- With an EV charger in place at Town Hall, the Town, Senior Center or Colchester PD could add an EV to their fleet and have a place to charge it.
- In addition to being located at Town Hall, the proposed charging location is:
 - Walkable via sidewalks and crosswalks to events at the Town Green on weekends;
 - Walkable via sidewalks and crosswalks to our Central Business District w/ restaurants, bars and shops;
 - Directly adjacent to the new Senior Center which will not have EV charging station.
- I have attached a screen shot of the PlugShare app showing the availability of publicly available EV chargers with Colchester at its center.
- I have also attached a usage report graciously provided by the Town of Hebron for their 3 EV charging locations for the dates of 1/1/23 – 3/12/24.

EV Registration Factsheet

This document serves to analyze the current demographic of the CT electric vehicle population to better inform public policy across the state. In collaboration with the CT DMV, DEEP receives vehicle registration data at the end of every six-month period. The DEEP EV Registration Factsheet is distributed a few weeks following each period. This factsheet includes an EV growth chart, EV categorizations, and an EV by Town index. Note: The following vehicle populations represent the total volume of EVs actively registered in the state on each specified date.

Revised: February 02, 2024
